

1. Install composer

```
Composer version 2.2.6 2022-02-04 17:00:38

Usage:
  command [options] [arguments]

Options:
  -h, --help                Display this help message
  -q, --quiet               Do not output any message
  -V, --version             Display this application version
      --ansi               Force ANSI output
      --no-ansi            Disable ANSI output
  -n, --no-interaction      Do not ask any interactive question
      --profile            Display timing and memory usage information
      --no-plugins         Whether to disable plugins.
      --no-scripts         Skips the execution of all scripts defined in composer.json file.
  -d, --working-dir=WORKING-DIR If specified, use the given directory as working directory.
      --no-cache            Prevent use of the cache
  -vv|vvv, --verbose        Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and 3 for debug

Available commands:
  about                    Shows a short information about Composer.
  archive                  Creates an archive of this composer package.
  browse                   Opens the package's repository URL or homepage in your browser.
  cc                       Clears composer's internal package cache.
  check-platform-reqs     Check that platform requirements are satisfied.
  clear-cache              Clears composer's internal package cache.
  clearcache               Clears composer's internal package cache.
  config                   Sets config options.
